Oxy-Kem Has Always Been Formaldehyde Free... And Always Will Be!

February 23, 2009 (Tulsa, OK) – With California recently banning the use of formaldehyde in chemical toilet products, manufacturers are scrambling to reformulate their products. Not so with Oxy-Kem holding tank treatment products from Winston Company.

According to Neal Zahn, President of Winston, “Oxy-Kem uses the natural power of oxygen to literally break down odor-causing molecules. The product is non-toxic, formaldehyde free, biodegradable and septic safe. Because the natural oxidation power of our product is so effective, we’ve never had to rely on toxic chemicals to do the job, and never will.”

Oxy-Kem is available at general retail stores and a stronger version, Oxy-Kem 2, is available at specialty RV and camping retail outlets. Both products come in convenient drop-in packets, tablets and scoops.

Winston Company (www.winstoncompany.com) develops, produces and markets organic-based products that use nature’s knowledge to clean the air, water, and land where we live, work and play. Besides Oxy-Kem™ Holding Tank Treatment, the company markets Doctor Drain® Natural Septic Treatment, OdorCide® Odor Eliminator, CrystalClear® water maintenance products, and Pet Scentsations™ pet care products.
